Renewal Readiness Checklist

Preparing for Renewal Long Before the Renewal Conversation Begins

Author: David Maika

Estimated Length: 20--25 Pages

Introduction

"The easiest renewals are never won during the renewal meeting---they're earned through every conversation that happens long before it."

Many organizations mistakenly believe that renewal begins when the contract is approaching its expiration date.

In reality, renewal begins the moment onboarding starts.

Every implementation milestone, Executive Business Review, stakeholder conversation, adoption review, support interaction, and business outcome contributes to one critical question the customer continuously asks:

"Are we receiving enough value to continue this partnership?"

By the time procurement sends a renewal notice, customers have often already formed their decision.

The commercial negotiation simply confirms what months of experience have already established.

Unfortunately, many Customer Success teams wait until thirty days before renewal to begin assessing customer readiness.

At that stage, unresolved adoption issues, executive disengagement, unclear business outcomes, and stakeholder changes become significantly more difficult to address.

A Renewal Readiness Checklist prevents this situation.

It provides Customer Success Managers with a structured framework for evaluating whether customers are genuinely prepared to renew---not just contractually, but strategically, operationally, and commercially.

Rather than relying on assumptions, the checklist measures business value, stakeholder alignment, product adoption, executive engagement, customer sentiment, and organizational readiness well before commercial discussions begin.

This creates time to resolve issues while solutions are still possible.

The objective of Renewal Readiness is not simply to secure another contract.

It is to ensure the customer confidently believes continuing the partnership is the best business decision available.

The strongest renewals are never surprises.

They are the natural outcome of consistent customer success.

Chapter 2

Understanding Renewal Readiness

Renewal Readiness is the process of evaluating whether a customer is positioned to confidently continue their partnership before the contract reaches its renewal date.

It goes far beyond checking whether procurement has received the renewal quote or whether budget has been approved.

A customer can be financially prepared to renew while still being strategically unprepared because they have not achieved meaningful business outcomes.

Likewise, a customer may be highly satisfied with the product but encounter organizational changes that delay or complicate renewal.

Renewal Readiness brings all of these factors together into one structured assessment.

A renewal-ready customer typically demonstrates several characteristics.

Business objectives have been achieved or are progressing as planned.

Product adoption remains healthy and continues to grow.

Executive stakeholders understand the value being delivered.

Relationships extend beyond a single champion.

Customer sentiment remains positive.

Commercial expectations are clear.

Potential risks have already been addressed.

Rather than asking, **"Will this customer renew?"**, Renewal Readiness asks a more useful question:

"If the renewal meeting happened today, have we already earned the customer's decision?"

That question shifts Customer Success away from contract management and toward long-term value creation.

Chapter 3

When Renewal Planning Should Begin

One of the biggest misconceptions in Customer Success is that renewal planning begins a few weeks before the contract expires.

By then, most renewal outcomes have already been influenced by months of customer experience.

Renewal planning should begin as early as onboarding and become increasingly structured as the renewal date approaches.

The following timeline provides a practical approach.

During Onboarding

Confirm business objectives.

Define measurable success metrics.

Build the Customer Success Plan.

Identify executive stakeholders.

Document renewal expectations.

Throughout the Customer Lifecycle

Review business outcomes regularly.

Monitor Customer Health Scores.

Conduct Executive Business Reviews.

Update Stakeholder Maps.

Track customer risks.

Celebrate measurable wins.

Every interaction contributes to renewal confidence.

120 Days Before Renewal

Launch the formal Renewal Readiness Assessment.

Review customer health.

Validate business outcomes.

Confirm executive sponsorship.

Identify commercial risks.

Begin internal planning.

90 Days Before Renewal

Resolve outstanding adoption issues.

Confirm procurement processes.

Review stakeholder alignment.

Conduct executive value conversations.

Address identified risks.

60 Days Before Renewal

Present measurable business outcomes.

Finalize commercial expectations.

Confirm renewal timeline.

Coordinate with Sales.

Remove remaining obstacles.

30 Days Before Renewal

Complete final executive alignment.

Confirm contract readiness.

Resolve open questions.

Support procurement.

Prepare transition into the next customer lifecycle.

Beginning renewal planning early creates time to solve problems while solutions are still practical.

Waiting until the final month usually means Customer Success is reacting instead of preparing.

Chapter 4

The Renewal Readiness Framework

A consistent framework ensures every Customer Success Manager evaluates renewal readiness using the same criteria.

This framework focuses on six key areas that together determine whether a customer is genuinely prepared to renew.

Pillar One

Business Value

Has the customer achieved meaningful business outcomes?

Can leadership clearly recognize measurable value?

Pillar Two

Product Adoption

Are users consistently adopting the product?

Have critical workflows become part of everyday operations?

Are key features being utilized?

Pillar Three

Stakeholder Alignment

Do relationships extend beyond one champion?

Are executive sponsors engaged?

Have new stakeholders been introduced?

Pillar Four

Customer Health

Does the current Health Score support renewal confidence?

Are there unresolved risks?

Have recent trends remained positive?

Pillar Five

Commercial Readiness

Is procurement aware of the renewal timeline?

Has budgeting been confirmed?

Are commercial expectations aligned?

Pillar Six

Future Success

Does the customer have a clear vision for the next phase of the partnership?

Have future goals been discussed?

Are there opportunities for continued business impact?

Together, these six pillars provide a balanced assessment of renewal readiness.

Rather than focusing solely on contract dates, they evaluate the overall strength of the customer relationship.

Chapter 5

Building a Renewal Readiness Checklist Step-by-Step

An effective Renewal Readiness Checklist should guide Customer Success Managers through a structured review process that identifies strengths, gaps, and actions well before renewal discussions begin.

Step One

Review the Customer Success Plan.

Compare current business outcomes with the objectives established during Discovery.

Confirm which goals have been achieved and which still require attention.

Step Two

Evaluate Customer Health.

Review Health Score trends rather than relying on a single monthly score.

Identify any declining indicators.

Step Three

Review Stakeholder Alignment.

Confirm that executive sponsors remain engaged.

Verify relationships across business, technical, and procurement teams.

Update the Stakeholder Map if necessary.

Step Four

Assess Business Value.

Collect measurable evidence demonstrating customer success.

Examples include:

Revenue improvements.

Operational efficiency.

Cost savings.

Productivity gains.

Customer satisfaction improvements.

Step Five

Review Commercial Readiness.

Confirm:

Budget availability.

Procurement process.

Contract owners.

Renewal timeline.

Sales coordination.

Step Six

Document Remaining Risks.

Review the Risk Register.

Assign mitigation actions.

Confirm owners.

Set completion dates.

Step Seven

Create the Renewal Action Plan.

Document all remaining activities required before the renewal conversation.

Assign ownership.

Define timelines.

Review progress regularly.

A Renewal Readiness Checklist transforms renewal from a last-minute commercial activity into a structured Customer Success process focused on delivering measurable business value.

Chapter 6

The Six Renewal Readiness Questions

Every Renewal Readiness Assessment should answer six critical questions before a renewal conversation begins.

If any question cannot be confidently answered with evidence, Customer Success should treat it as a priority action rather than waiting for the renewal meeting.

These six questions form the foundation of a successful renewal strategy.

Question 1

Has the Customer Achieved Their Business Goals?

This is the most important question in the entire renewal process.

Customers purchased your solution because they expected measurable business outcomes.

If those outcomes have not been achieved, renewal conversations become significantly more difficult.

Review the original Customer Success Plan.

Compare expected outcomes against current performance.

Collect measurable evidence such as:

Revenue growth.

Operational efficiency.

Reduced costs.

Time savings.

Improved customer satisfaction.

Compliance improvements.

Productivity gains.

The stronger the business outcomes, the easier the renewal discussion becomes.

Question 2

Is Product Adoption Healthy?

Business outcomes depend on consistent product adoption.

Review:

Weekly Active Users.

Monthly Active Users.

Feature adoption.

Workflow completion.

Administrator engagement.

License utilization.

Training completion.

Declining adoption often indicates hidden risks that should be resolved before renewal planning progresses.

Question 3

Are the Right Stakeholders Engaged?

Many renewals become complicated because Customer Success has built a relationship with only one individual.

Confirm engagement across:

Executive Sponsors.

Business Leaders.

Technical Teams.

Administrators.

Procurement.

Finance.

Security.

Legal where applicable.

A diversified stakeholder network significantly reduces renewal risk.

Question 4

Are There Any Unresolved Risks?

Review the Customer Risk Register.

Ask:

Have implementation issues been resolved?

Are support escalations closed?

Have executive concerns been addressed?

Has stakeholder turnover affected the relationship?

Are business priorities changing?

Any unresolved high-impact risks should receive immediate attention before commercial discussions begin.

Question 5

Is the Customer Seeing Clear Return on Investment?

Customers rarely renew because they like software.

They renew because they believe the investment has generated measurable value.

Be prepared to demonstrate:

Business outcomes achieved.

Financial impact.

Operational improvements.

Efficiency gains.

Risk reduction.

Customer satisfaction improvements.

Use the customer's own data whenever possible.

Business evidence is always more persuasive than product demonstrations.

Question 6

Does the Customer Have a Vision Beyond Renewal?

Renewal should never represent the end of the conversation.

It should represent the beginning of the next phase of customer success.

Discuss:

Future business goals.

Upcoming initiatives.

Expansion opportunities.

Product roadmap alignment.

Strategic priorities.

Long-term partnership objectives.

Customers who see a clear future with your organization are far more likely to renew confidently.

Chapter 7

Common Renewal Risks

Most unsuccessful renewals do not fail because of pricing.

They fail because unresolved customer risks accumulate throughout the relationship.

Recognizing these risks early allows Customer Success Managers to intervene before commercial discussions begin.

Weak Business Outcomes

The customer cannot clearly identify measurable value.

Business objectives remain incomplete.

Success metrics were never defined.

Low Product Adoption

Users are inactive.

Critical features remain unused.

Administrators are disengaged.

Training participation has declined.

Executive Disengagement

Executive sponsors no longer attend reviews.

Leadership has changed.

Business priorities have shifted.

Customer Success lacks executive visibility.

Single Champion Dependency

Only one stakeholder understands the value delivered.

The departure of that individual creates significant renewal uncertainty.

Open Support Issues

Critical product issues remain unresolved.

Support escalations continue.

Customer confidence begins to decline.

Commercial Misalignment

Budget has not been approved.

Procurement timelines are unclear.

Pricing expectations differ.

Sales and Customer Success are not aligned.

Organizational Change

Company restructuring.

Acquisitions.

Leadership turnover.

New strategic priorities.

Economic pressures.

These changes often affect renewal decisions even when customers remain satisfied with the product.

Competitive Pressure

Customers begin evaluating alternative solutions.

Competitors introduce lower pricing.

Internal teams request comparative evaluations.

Customer Success should respond by reinforcing measurable business outcomes rather than focusing solely on product capabilities.

Practical Scenario

A customer consistently achieved excellent product adoption and positive Health Scores.

However, three months before renewal, the organization announced a company-wide cost reduction initiative.

Every software investment would be reviewed.

Rather than waiting for procurement to raise pricing concerns, the Customer Success Manager prepared an executive value presentation demonstrating:

Annual operational savings.

Productivity improvements.

Reduced manual work.

Compliance improvements.

Time-to-value achieved since implementation.

When budget discussions began, leadership already understood the measurable return on investment.

The renewal proceeded successfully because Customer Success addressed the commercial risk before it became an objection.

Renewal risk should never be managed at renewal.

It should be managed throughout the customer lifecycle.

Chapter 8

Stakeholder Alignment Before Renewal

Strong stakeholder alignment is one of the strongest predictors of renewal success.

Customers rarely make renewal decisions individually.

Executive leaders, procurement, finance, IT, legal, department heads, administrators, and end users often contribute to the final decision.

Customer Success Managers should therefore ensure that every critical stakeholder understands both the value delivered and the future direction of the partnership.

Before renewal, verify that:

Executive sponsors remain engaged.

Business champions continue advocating internally.

Procurement understands renewal timelines.

Finance has budget visibility.

Technical teams remain confident in the solution.

Operational users continue receiving value.

If any critical stakeholder has changed roles or left the organization, rebuild those relationships immediately.

Renewals become significantly more predictable when customer value is understood across the organization rather than by one champion alone.

Strong stakeholder alignment reduces surprises.

It also creates multiple advocates who can reinforce business value during internal renewal discussions.

Chapter 9

Business Value Validation

Business Value Validation is the process of proving, with measurable evidence, that the customer has achieved meaningful outcomes from their investment.

This is one of the most important activities before renewal because customers rarely renew based on product features alone.

They renew because they believe the solution has improved their business.

Customer Success Managers should therefore avoid making vague statements such as:

"Our platform has improved your operations."

Instead, present measurable evidence that demonstrates business impact.

Business Value Validation should answer three questions:

What was the customer's original objective?

What measurable improvements have been achieved?

What would happen if the solution were no longer available?

The strongest evidence comes directly from customer data.

Examples include:

Reduction in operational costs.

Increase in employee productivity.

Reduction in customer response time.

Higher customer satisfaction.

Increased revenue.

Reduced processing time.

Lower compliance risk.

Improved operational efficiency.

Where possible, compare current performance against the baseline established during Discovery.

For example:

Customer objective:

Reduce loan approval time from five days to two days.

Current performance:

Average approval time reduced to 1.8 days.

Business impact:

Faster customer onboarding.

Higher customer satisfaction.

Increased application volume.

Reduced manual processing costs.

This type of evidence is significantly more persuasive than simply describing product functionality.

Customer Success Managers should collect Business Value Validation continuously throughout the customer lifecycle rather than attempting to reconstruct it shortly before renewal.

Executive Business Reviews provide an ideal opportunity to document these achievements over time.

The renewal conversation should simply summarize value that has already been demonstrated repeatedly.

Chapter 10

Renewal Timeline (120 / 90 / 60 / 30 Days)

Successful renewals rarely happen by accident.

They result from structured planning that begins several months before the contract expires.

The following timeline provides a repeatable framework for managing renewal readiness.

120 Days Before Renewal

Launch the Renewal Readiness Assessment.

Review the Customer Success Plan.

Evaluate Customer Health Score.

Review the Risk Register.

Validate business outcomes.

Confirm executive sponsorship.

Identify commercial risks.

Meet internally with Sales to align renewal strategy.

This stage focuses on identifying and resolving potential obstacles while there is still enough time to act.

90 Days Before Renewal

Review stakeholder alignment.

Conduct an Executive Business Review.

Update measurable business outcomes.

Resolve adoption concerns.

Confirm procurement contacts.

Validate renewal timeline.

Update the Success Plan.

Review expansion opportunities.

At ninety days, the objective is to eliminate uncertainty.

60 Days Before Renewal

Present business impact summary.

Confirm customer satisfaction.

Review remaining risks.

Coordinate commercial discussions with Sales.

Validate contract requirements.

Finalize executive messaging.

This stage shifts from preparation toward execution.

The customer should already recognize the value delivered.

30 Days Before Renewal

Confirm final stakeholder alignment.

Support procurement process.

Resolve final legal or commercial questions.

Confirm renewal documentation.

Prepare post-renewal Success Plan.

Celebrate customer achievements.

At this stage, the renewal conversation should feel like a natural continuation of a successful partnership rather than a negotiation.

Practical Timeline Summary

Timeline Primary Focus

120 Days Readiness Assessment and Risk Identification

90 Days Stakeholder Alignment and Business Value Validation

60 Days Commercial Preparation and Executive Engagement

30 Days Contract Completion and Partnership Continuation

Organizations that consistently follow this timeline experience fewer last-minute surprises and significantly more predictable renewals.

Chapter 11

Renewal Conversation Strategy

The renewal conversation should never begin with pricing.

It should begin with outcomes.

Customers are far more receptive to commercial discussions when they first recognize the value they have already achieved.

A structured renewal conversation generally follows five stages.

Stage One

Recap the Original Business Goals

Begin by reminding the customer why they invested in the solution.

Review the objectives documented during Discovery.

Reconnect the conversation to their own definition of success.

Stage Two

Demonstrate Business Outcomes

Present measurable improvements achieved since implementation.

Use customer-specific metrics.

Highlight operational improvements.

Show before-and-after comparisons.

Focus on business impact rather than product functionality.

Stage Three

Discuss Remaining Opportunities

Acknowledge any objectives that remain unfinished.

Discuss future priorities.

Position renewal as the next phase of achieving even greater business outcomes.

Stage Four

Review the Future Roadmap

Share relevant product enhancements.

Discuss strategic initiatives.

Explore future collaboration opportunities.

Help the customer visualize continued success beyond the current contract.

Stage Five

Transition into Commercial Discussion

Only after business value has been clearly established should pricing, contracts, procurement, and commercial terms be discussed.

This sequence keeps the conversation centered on value rather than cost.

Practical Scenario

A Customer Success Manager enters a renewal meeting with an enterprise customer.

Instead of opening with contract dates and pricing, the meeting begins by reviewing the goals established twelve months earlier.

The Customer Success Manager demonstrates that onboarding time has decreased by 45%, customer satisfaction has increased by 18%, and manual processing has been reduced by 30%.

The executive sponsor confirms that these improvements have exceeded expectations.

Only after establishing this shared understanding of value does the conversation transition to renewal terms.

Because the discussion is anchored in measurable business outcomes rather than product features or pricing, the customer views renewal as a continuation of business success rather than a purchasing decision.

The strongest renewal conversations never convince customers to renew.

They simply remind customers why renewing is the logical next step.

Chapter 12

Real World Case Study

LendWise

LendWise provides digital lending solutions to financial institutions across multiple regions.

Although the Customer Success team maintained strong customer relationships throughout implementation and onboarding, leadership noticed an inconsistent renewal pattern.

Some customers renewed early with minimal negotiation.

Others delayed procurement until the final weeks of the contract, creating unnecessary commercial pressure and forecasting uncertainty.

After reviewing several accounts, leadership discovered the same issue repeatedly.

Renewal planning was beginning too late.

Customer Success Managers were waiting until approximately sixty days before contract expiration before conducting formal renewal reviews.

By that stage, unresolved stakeholder changes, incomplete business outcomes, adoption gaps, and procurement delays had already become obstacles.

To address this challenge, LendWise introduced a standardized Renewal Readiness Checklist beginning one hundred and twenty days before every renewal.

Every account was assessed across six areas:

Business Value.

Product Adoption.

Stakeholder Alignment.

Customer Health.

Commercial Readiness.

Future Success Planning.

Each Customer Success Manager worked closely with Sales, Product, and Support to resolve outstanding risks before commercial conversations began.

One enterprise banking customer demonstrated strong product adoption and positive Health Scores but experienced a significant executive leadership change four months before renewal.

The original executive sponsor left the organization.

The incoming executive had limited knowledge of the implementation and questioned whether the platform aligned with the bank's updated strategic direction.

Rather than waiting until procurement requested pricing, the Customer Success Manager scheduled an Executive Business Review focused entirely on measurable business outcomes.

The review demonstrated:

A 42% reduction in manual loan processing.

Faster customer onboarding.

Higher operational efficiency.

Reduced compliance risks.

Improved customer satisfaction.

The Customer Success Manager also introduced the new executive sponsor to operational leaders who had experienced these improvements firsthand.

By the time commercial discussions began, leadership clearly understood the value already being delivered.

The renewal was completed ahead of schedule without unexpected negotiation.

The success was not created during the renewal meeting.

It was created by beginning renewal planning early enough to address risks before they became barriers.

Chapter 13

Fully Completed Renewal Readiness Checklist

Customer Information

Customer: LendWise

Industry: Financial Technology

Customer Success Manager: David Maika

Contract Expiration: January 31, 2027

Renewal Review Date: October 1, 2026

Renewal Readiness Assessment

Assessment Area Status Notes

Business Outcomes Achieved	Complete Operational KPIs exceeded target
Product Adoption	Healthy Core workflows fully adopted
Executive Sponsorship	Confirmed Executive sponsor actively engaged
Stakeholder Alignment	Complete Procurement, Finance, IT and Operations aligned
Customer Health Score	Green Overall Health Score: 91/100
Commercial Readiness	Ready Budget approved and procurement informed
Risk Register Reviewed	Complete No unresolved high-impact risks
Executive Business Review	Complete Value presentation delivered Conducted
Success Plan Updated	Complete Next-year objectives agreed
Future Growth	Complete Expansion planned for additional Opportunities Identified business units

Remaining Actions

- Finalize renewal documents.
- Schedule contract review meeting.
- Prepare post-renewal Success Plan.
- Coordinate expansion discovery after renewal.

Overall Renewal Status

Renewal Confidence: High

Recommended Action: Proceed with commercial renewal discussions.

Chapter 14

Common Mistakes

One of the most common mistakes Customer Success teams make is treating renewal as a commercial event instead of a customer success milestone.

When value has not been demonstrated consistently throughout the year, the renewal meeting becomes an attempt to justify the investment rather than confirm it.

Another common mistake is beginning renewal planning too late.

Thirty days rarely provides enough time to rebuild executive relationships, improve adoption, resolve implementation issues, or demonstrate measurable business outcomes.

Organizations also underestimate the importance of stakeholder alignment.

Many Customer Success Managers build excellent relationships with operational users while overlooking executive sponsors, procurement teams, finance, and legal stakeholders who ultimately influence renewal decisions.

Another mistake is discussing pricing before discussing value.

When commercial conversations begin without first reinforcing business impact, customers naturally focus on cost rather than return on investment.

Some teams also neglect the Risk Register during renewal planning.

Unresolved implementation issues, declining adoption, executive turnover, or support escalations often become renewal obstacles if not addressed proactively.

Finally, many Customer Success Managers fail to document customer achievements throughout the year.

Attempting to reconstruct twelve months of business impact a few weeks before renewal is difficult and often incomplete.

The strongest renewal conversations are built on evidence collected continuously---not remembered at the last minute.

Chapter 15

AI Workflow for Renewal Readiness

Artificial Intelligence enables Customer Success teams to prepare for renewals more efficiently by analyzing customer data across multiple systems and identifying patterns that may influence renewal outcomes.

AI can automatically review:

Customer Health Scores.

CRM activity.

Product adoption.

Support history.

Meeting transcripts.

Executive Business Review notes.

Customer surveys.

Renewal history.

Stakeholder engagement.

Using these signals, AI can identify:

Accounts approaching renewal.

Declining Health Score trends.

Executive disengagement.

Adoption risks.

Commercial risks.

Expansion opportunities.

AI can also generate:

Renewal readiness summaries.

Executive value reports.

Business outcome summaries.

Renewal meeting agendas.

Customer-specific renewal risks.

Draft renewal action plans.

However, AI should never replace customer conversations.

It provides recommendations based on available data, while Customer Success Managers contribute the relationship context, strategic understanding, and professional judgment required to make effective renewal decisions.

The best renewal strategies combine AI-driven insights with human expertise.

AI accelerates preparation.

Customer Success builds trust.

Chapter 16

Best Practices

Successful renewals are the result of consistent Customer Success practices rather than last-minute commercial efforts.

The following best practices help Customer Success Managers create predictable, value-driven renewal outcomes.

Begin renewal planning at least 120 days before the contract expiration date.

This provides sufficient time to resolve adoption issues, strengthen stakeholder relationships, validate business outcomes, and address commercial risks before procurement discussions begin.

Keep the Customer Success Plan updated throughout the customer lifecycle.

A Success Plan that accurately reflects changing customer priorities makes renewal conversations significantly easier because business outcomes have already been documented.

Conduct Executive Business Reviews consistently rather than only before renewal.

Regular business reviews reinforce customer value, strengthen executive relationships, and prevent renewal discussions from becoming the first strategic conversation in months.

Review Customer Health Scores and Risk Registers together.

A healthy account should still be evaluated for organizational, commercial, or relationship risks that may not yet appear in product usage data.

Maintain relationships across multiple stakeholders.

Executive sponsors, operational leaders, administrators, procurement, finance, and IT should all understand the value your solution delivers.

Never depend on a single customer champion.

Document business outcomes continuously.

Every measurable improvement should be captured as it happens rather than reconstructed at renewal time.

Coordinate closely with Sales throughout the renewal process.

Customer Success should own customer outcomes.

Sales should own commercial negotiations.

When both teams operate from the same Success Plan and customer data, the renewal experience becomes seamless.

Lead every renewal conversation with business value.

Customers should clearly understand the return they have already received before pricing is discussed.

Finally, remember that renewal is not the destination.

It marks the beginning of the customer's next stage of growth.

Customer Success should leave every renewal meeting with a new Success Plan already taking shape.

Conclusion

Renewal is not a sales event.

It is the outcome of every promise made, every milestone achieved, every challenge resolved, and every business result delivered throughout the customer journey.

Organizations that consistently achieve high renewal rates do not rely on persuasive negotiation or last-minute discounts.

They create measurable customer value long before renewal conversations begin.

A structured Renewal Readiness Checklist ensures that Customer Success Managers evaluate customer health, stakeholder alignment, business outcomes, commercial readiness, and future opportunities in a consistent and proactive way.

When used alongside the Customer Success Plan, Stakeholder Map, Health Scorecard, Risk Register, and Executive Business Reviews, it becomes a powerful operational framework for reducing uncertainty and increasing renewal confidence.

The best renewals are never the result of a great closing conversation.

They are the natural conclusion of an outstanding customer experience.
